Spirometry and Other Lung Function Tests - WebMD - Better -

Sep 08, 2014 Lung function tests (also called pulmonary function tests) can diagnose lung diseases, measure the severity of lung disease, and monitor the response to treatment. Spirometry is a test that measures how much air you can breathe in and out and how fast you can breathe out. It is used to diagnose and monitor chronic obstructive pulmonary disease (COPD), asthma, and other lung conditions. Spirometry is a type of pulmonary function test (PFT). Other PFTs include lung volume measurement, diffusing capacity, and maximal inspiratory pressure.
